

# VAC-CON

MORE **POWER** TO YOU

SINGLE ENGINE  
PD COMBINATION MACHINE

## VAC-CON'S SINGLE ENGINE DESIGN TAKES THE COMPLEXITY OUT OF SINGLE ENGINE PD MACHINES!

Only Vac-Con uses the simplicity of hydrostatic drive to power both the vacuum and water systems with a single engine. No transfer case is required to drive the two hydrostatic pumps, the machine operates with the chassis in neutral and features simple and independent control of both systems. If you are looking for a single-engine machine, Vac-Con's unique design offers the best value without sacrificing performance or ease of operation.
