

Stellar® Adjustable Sliding Jib Hooklift Hoists

SLIDER20 & 26

TECHNICAL SPECIFICATION GUIDE

The Stellar® Slider hooklift hoist is a container handling system mounted on a truck chassis that is capable of loading, unloading and dumping various containers of varying lengths through the use of a sliding hexagonal jib. The hex jib reduces flex and provides greater structural integrity.

The Slider still maintains all of Stellar Industries' safety and mechanical features, such as the in-cab controls and safety latches, to insure stability and secure attachment. All Stellar hooklift hoists feature permanently lubricated greaseable bushings, stainless steel pins and an efficient low-flow / high-pressure hydraulic system.

■ KEY FEATURES

Base section	The base section of a Stellar Slider may also be called a sub-frame. All Stellar Slider hooklifts are tied together in one common framework. This base section not only adds strength to the loader, but it places less stress concentration on the truck chassis than hooklifts without a common base. The base section provides for simple installation on most truck chassis.
Latches	Inside and or outside latches available.
Jib/secondary	The sliding jib allows for a wider range of container lengths and a means to control the truck's weight distribution while remaining in the latches. The jib and secondary booms are hexagonal shaped to reduce flexing, adding to structural integrity.
Wear pads	Easily replaceable wear pads for the jib/secondary boom assemblies that can be changed in minutes. Not necessary to disassemble hooklift to replace wear pads. The wear pads ensure long life for the jib/secondary assemblies.
Dump section	Dumping is accomplished through rear pivot point. Jib and dump sections must lock together to support the full length of container/body when in the dump mode.
Skid rollers	These three sets of rollers allows skid to roll freely forward and backwards while operating the jib. Prevent long sills from wearing prematurely, not dragging steel on steel. Also eliminates the need to replace wear pads on base frame.
Bushings and zerks	Bushings and grease zerks at all pivot points.
Counterbalance valves	Counterbalance valves are used on all cylinders, protecting both extend and retract functions in case of a hydraulic hose failure.
Pins	Carbon steel and zinc plated or type 17-4 stainless steel to prevent corrosion.
